LessonPlanNo	UnitNo	LessonPlanTitle	LessonPlanDescription
1	1	Stack Operations	Implement Stack using arrays with create, push, pop, peek, traverse and search
2	1	Infix to Postfix Conversion	Develop a program to convert infix expressions into postfix expressions using Stack.
3	1	Postfix Expression Evaluation	Implement postfix expression evaluation using Stack.
4	2	Tower of Hanoi	Implement the Tower of Hanoi problem using recursion/stack concepts.
5	2	Queue Operations	Implement Queue using arrays with enqueue, dequeue, traverse and search operations.
6	3	Singly Linked List	Implement Singly Linked List with create, insert, delete, traverse, search and reverse.
7	3	Doubly Linked List	Implement Doubly Linked List with create, insert, delete, traverse, search and reverse.
8	3	Circular Linked List	Implement Circular Linked List with create, insert, delete, traverse, search and reverse.
9	4	Searching Algorithms	Implement Linear Search, Binary Search and Interpolation Search and compare their
10	4	Sorting Algorithms	Implement Bubble, Selection, Insertion, Quick and Merge Sort algorithms and compare
11	5	Binary Search Tree	Implement Binary Search Tree with creation, insertion, deletion and searching.
12	5	BST Traversals	Implement Preorder, Inorder and Postorder traversals of a Binary Search Tree.
13	6	Graph Representation and Traversals	Implement Graph using adjacency matrix and adjacency list with BFS and DFS
